END OF DAY · 30 OCTOBER 2026

Visual pipeline, plumbing review, and a live dashboard

Today shipped the live pipeline state and candidate thumbnail in the admin dashboard, opened a new fictional plumbing intake for a cross-niche creative review, and carried the café visual pipeline to a clear technical and creative status.

157	0	1	1
tests passed	type errors across 490 files	platform deploy succeeded	creative run in progress

Executive summary

- **Live dashboard shipped.** Running attempts now refresh without a manual click, the inspector shows the current stage, and the repair loop publishes a candidate thumbnail after every creative round.
- **Plumbing review opened.** A new fictional client, Alder & Iron Plumbing Co., is running through the creative pipeline against utility and poster references, not the ornate café reference.
- **Provider finding.** The OpenCode Go reference analyzer rejected the technician-led plumbing references with a provider 400. The same three references analyzed successfully on OpenRouter with DeepSeek V4.1 Flash, so the run moved to that provider.
- **Café status is honest, not green.** The flat-contrast fix is proven by a technical pass, and the hero overlay correction is visually verified. The latest café run still fails focus-state contrast and creative reference fidelity.

Shipped and carried forward

AREA	CHANGE	COMMIT / RUN	STATUS
Live dashboard	Baseline live poll, current-stage line, pulsing live dot, per-round candidate thumbnail.	`a27ec01a` deploy `41123393342`	DEPLOYED
Plumbing review	New fictional intake #217, three reference routes, OpenRouter rerun after the Go analyzer failure.	run `41114829311`	IN PROGRESS
Café pipeline	Flat-contrast repair, deterministic hero overlay, author reliability. Carried from the prior session.	`bca65aa9` · `e5d0cdd8` · `7e7ae103`	CREATIVE GATE OPEN

Live dashboard

Two phases were approved and shipped. The dashboard now shows work while it is happening, not only after delivery.

Phase 1 · live pipeline state

- 30-second baseline poll, 15 seconds while a run is active.
- New intakes appear without pressing Refresh.
- Running attempts show a pulsing live dot.
- The inspector shows *Current stage: stage (status)* from the latest event.

Phase 2 · live candidate thumbnail

- The repair loop uploads the strongest rendered candidate after every bakeoff round.
- Focused runs use the exact `github:run:attempt` hero id; full runs use the issue.
- The image URL is versioned by the attempt update time, so each round replaces the previous capture.
- The current plumbing run predates the upload code; the next creative run verifies it end to end.

Plumbing cross-niche review

Intake: Alder & Iron Plumbing Co., Beaverton, OR. Five services, deep teal and brass, process-only differentiators, private test email, no invented licenses, guarantees, prices, reviews, staff, or office.

Why plumbing: the café reference is ornate and atmospheric. Plumbing references are conversion-first and functional: problem posters, dispatch consoles, quote desks, service triage, a visible phone or schedule control.

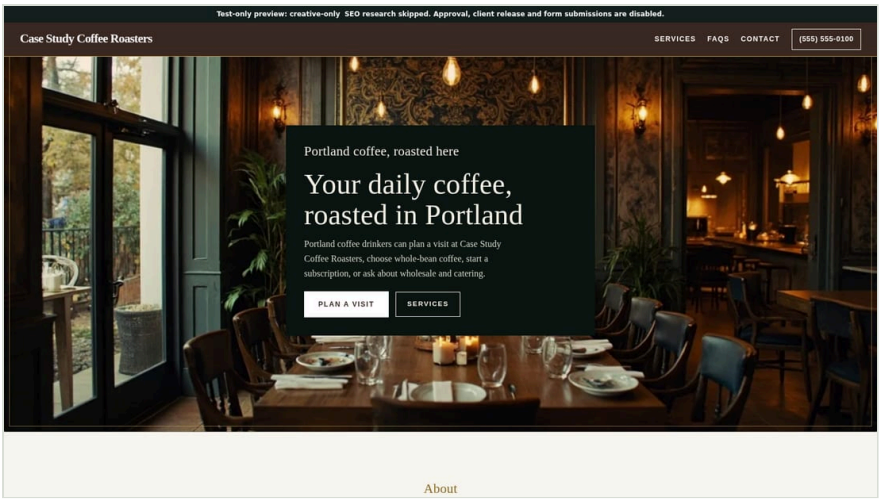

ROUTE	REFERENCE LANGUAGE	EXPECTED TEST
route-01	Fixwell Quote Desk: hero quote form, problem index, postcode lookup.	Utility panel and conversion-first opening.
route-02	Roto-Rooter: van and technician, large phone number, ZIP finder, illustrated tiles.	People-led imagery versus the people-free asset policy.
route-03	Morris-Jenkins: campaign poster, uniformed technician, bold schedule control.	Human trust signal, service tiles, palette discipline.

KEY FINDING

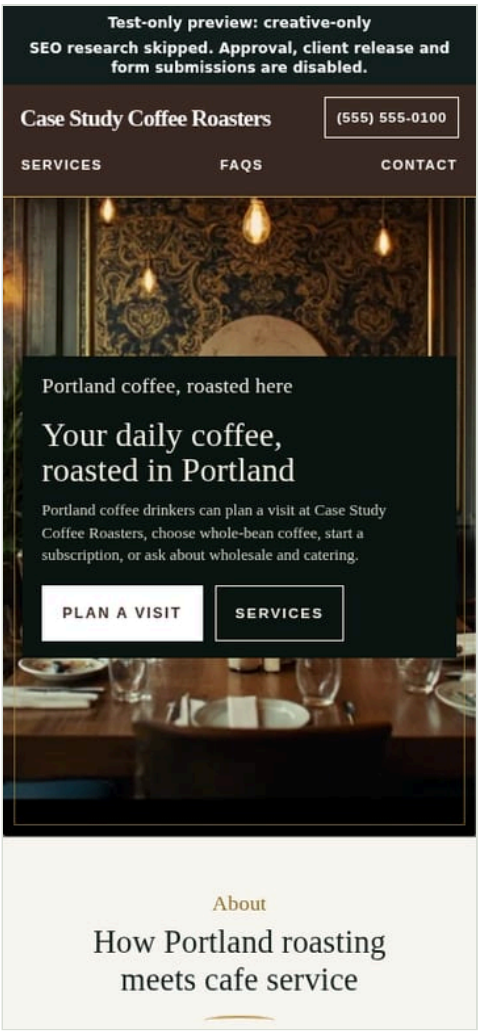

The OpenCode Go reference analyzer returned a provider 400 on the Roto-Rooter route, then failed all retries. The full three-route pack analyzed successfully on OpenRouter with the same DeepSeek V4.1 Flash model. The creative approach also has a structural tension: its people-free imagery policy conflicts with plumbing references whose opening subject is a technician or a van. A people-free reference strategy, or a separate analyzer path, is required for this niche.

First run: `41083094486` failed in nine minutes at the reference analyzer, before authoring. **Rerun:** `41114829311` on OpenRouter, in progress at the time of this report.

Visual pipeline

Café candidate after the deterministic hero correction. The image fills the stage, the promise group floats on a compact panel, and both actions remain visible.

Mobile recomposition at 390 px. The live render still has an open focus-state contrast finding, so this is a visual correction, not a gated pass.

Carried forward · café pipeline

ITEM	EVIDENCE	STATUS
Flat muted-text contrast	Technical run `40766939935` passed with zero contrast failures. Focus-state text now repairs as a foreground color scoped to the owning control.	PROVEN
Image-overlay hero	Deterministic route-scoped CSS makes the media full-bleed and floats a compact panel. The prior candidate's local render passes contrast with zero failures; the latest candidate still has focus-state contrast findings.	VISUAL PROVEN
Author reliability	Contract budget 32k tokens / 6 minutes, contract minimum lengths, direct service support bindings. Author passed in `40916150316`.	SHIPPED
Latest gated candidate	Run `40916150316` failed technical on 21 unresolved focus-state contrast findings and creative after 20 rounds. Scores were 50 to 65 against dimension floors of 72 to 80.	OPEN

> The café creative gap is not a single repair. The current authoring approach is 20 to 30 points below the reference-fidelity floors on several dimensions. Another identical run is unlikely to close it; the next decision is a stronger reference-authoring pass, not another repair loop.

Validation

CHECK	RESULT
Admin and creative-repair tests	157 passed
Type check	0 errors, 0 warnings across 490 files
Worker type check	Clean
Platform deploy	`41123393342` succeeded at `a27ec01a`
Plumbing creative run	`41114829311` in progress

Next

1. Inspect the plumbing run when it lands and complete the cross-niche review with the selected reference, candidate scores, technical and creative gates, hero, mobile actions, and preview.
2. Verify the live candidate thumbnail on the next creative run with the deployed upload code.
3. Decide the café creative path: strengthen reference authoring or change the model or route strategy. The technical contrast work is proven; the creative fidelity floors are the remaining blocker.
4. Keep public production blocked until the café provides written authorization.
